

Virtual Control Center v2t

VCC

The Virtual Control Center (VCC) is the **trafficnow Data Center Cloud**; offering a robust Tier 3 standard web based plug & play solution for both DeepBlue Core and DeepBlue Core+. The VCC is the easiest way to get a travel time system up and running with minimum hassle; offering all the services of The DeepBlue Core and Core+ without having to install the server locally.

With the DeepBlue Sensors and RTMS factory configured to send data to the Virtual Control Center you barely need to do more than power them up, connect them to the internet and log on to the VCC platform to get real-time traffic information. With the VCC you also get upgrades and maintenance included.

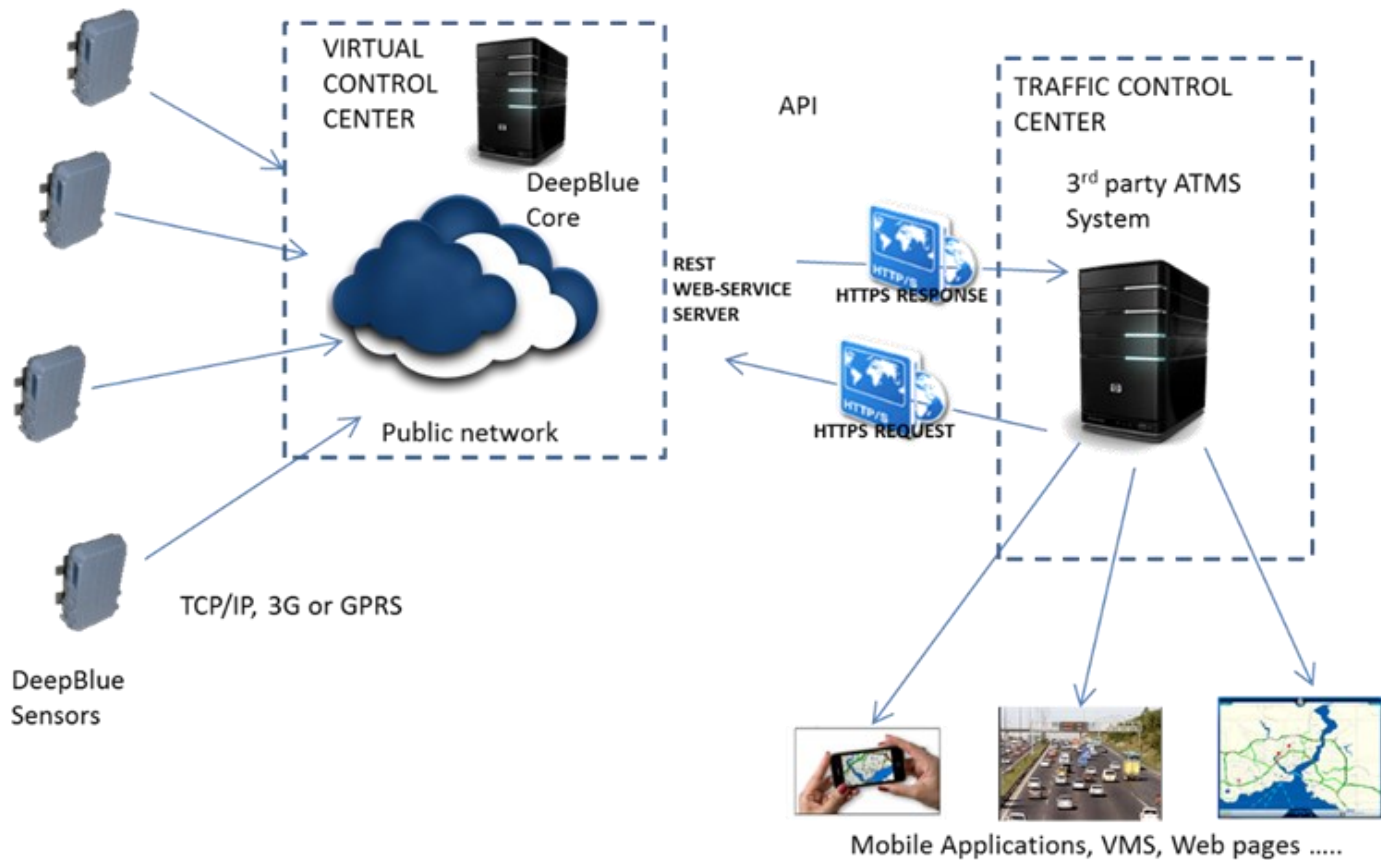

For integration with third party traffic management systems the VCC offers the same XML-data and web-services as the locally installed server.

With our dedication to continuous development the specifications are subject to change. To verify the current information please visit www.deepbluesensor.com

Virtual Control Center v2t

VCC

SETUP/SYSTEM

Clouding platform
 Supports DeepBlue Core
 Supports DeepBlue Core+
 Web-based solution
 Different User levels
 Multi-language support
 Multiple simultaneous sessions
 GPS –based setup
 Linux, MySQL
 IP-based network; FTP, SSH, TCP Socket

DIAGNOSTICS

Health monitoring
 Battery level alarms
 Data transfer logs
 Reboot logs
 Modem diagnostics
 Dynamic IP-updates
 Automatic email notifications

VISUALIZATION

Google Maps (requires license)
 OSM
 Matrices
 heatmaps
 Graphs

OUTPUT

Integration through Web services
 Excel for report/data download
